Resource 1: Litterbugs

Can you sort the items of litter into the correct bin?

Paper & Card

Compost

Plastic

Glass

Cans

Resource 2: Sea Creatures

Match me to my clue:

Most of us swim with our mouths open. This lets water pass over our gills, meaning that most of our species never stay still in the water.

We have lived in the oceans for more than 420 million years. That makes us older than trees!

Our skin is made up of tooth-like scales which break up the water so we can dart through the ocean.

All of us are born male.

Each of our groups include one large female and smaller males.

Not all of us are orange – there are 28 different species of us, which can be red, yellow, black or pink.

You might have heard of a famous one of our species... he's called Nemo!

We are actually not very good at swimming... We use our tails to hang on to seaweed and coral to stop ourselves being washed away.

When we mate, we mate for life. We strengthen our bond with our partners every morning by doing complicated dances and changing colour.

We can catch food both with our oral arms and our tentacles.

First we sting and trap our prey with our tentacles, then we use our oral arms to grab the prey and pass it into our mouths.

Most of us are harmless to humans, but some of us can cause a painful sting.

Our tentacles can THINK on their own! They can even solve problems and do lots of different things at the same time.

We have THREE hearts. One to pump blood through our body and two to pump blood to our gills.

We are ancient reptiles who have been around for 200 million years! We shared the planet with the earliest dinosaurs.

We are reptiles so sometimes have to breathe air. We are often seen coming to the surface to fill our lungs.

We can hold our breath for several hours at a time if we are not stressed, for example when we are sleeping.

Sea Creatures: Answers

Match me to my clue:

SHARK

Most of us swim with our mouths open. This lets water pass over our gills, meaning that most of our species never stay still in the water.

We have lived in the oceans for more than 420 million years. That makes us older than trees!

Our skin is made up of tooth-like scales which break up the water so we can dart through the ocean.

CLOWNFISH

All of us are born male.

Each of our groups include one large female and smaller males.

Not all of us are orange – there are 28 different species of us, which can be red, yellow, black or pink.

You might have heard of a famous one of our species... he's called Nemo!

SEAHORSE

We are actually not very good at swimming... We use our tails to hang on to seaweed and coral to stop ourselves being washed away.

When we mate, we mate for life. We strengthen our bond with our partners every morning by doing complicated dances and changing colour.

JELLYFISH

We can catch food both with our oral arms and our tentacles.

First we sting and trap our prey with our tentacles, then we use our oral arms to grab the prey and pass it into our mouths.

Most of us are harmless to humans, but some of us can cause a painful sting.

OCTOPUS

Our tentacles can THINK on their own! They can even solve problems and do lots of different things at the same time.

We have THREE hearts. One to pump blood through our body and two to pump blood to our gills.

TURTLE

We are ancient reptiles who have been around for 200 million years! We shared the planet with the earliest dinosaurs.

We are reptiles so sometimes have to breathe air. We are often seen coming to the surface to fill our lungs.

We can hold our breath for several hours at a time if we are not stressed, for example when we are sleeping.

Sea Defenders Reminders

Bookmark reminders to print, cut out and give to your class

I'M A SEA DEFENDER!

1. Pick up litter
2. Don't use plastic bags
3. Look for less packaging
4. Avoid toiletries that contain microbeads
5. Reduce, re-use and recycle plastic

Sea Defender Pledge

I'm a Sea Defender! My pledge is...

A large rectangular box with a solid blue border, containing ten horizontal dashed blue lines for writing a pledge.
